Data used in preparation of this publication were compiled at the Criminal Justice Data Center of the Montana Board of Crime Control.

Digitized by the Internet Archive in 2011 with funding from Montana State Library

### FORWARD

Crime in Montana is an annual report of the Montana Board of Crime Control's Criminal Justice Data Center. It is a statistical representation of the criminal activity occurring in our state during the past year and includes a section on the Montana Youth Courts.

During the state's 1985 legislative session a new focus began to emerge for criminal justice; a concern for the impact crime has on its victims. Each one of the 56,925 serious crimes reported to our law enforcement agencies last year represents at least one more person to suffer from the trauma of being a crime victim.

This publication is only the first step in documenting the crime problem in our state and it would not be possible without the voluntary support of the law enforcement agencies who contribute the data.

Mike A. Lavin, Administrator Montana Board of Crime Control

SECTION ONE

M.U.C.R. REPORTING PROGRAM

### INTRODUCTION

This report presents the most complete and accurate information currently available about crime in the State of Montana. It contains an extensive collection of facts and detailed analyses of the prevalence of different types of crime, crime trends and offenses known and arrests made by law enforcement. It is a summary of the nature, extent and location of crime in the state.

The Montana Uniform Crime Reporting program addresses the informational needs of law enforcement administrators, planners, legislators, and local government officials. It also affords citizens an opportunity to assess the state's crime situation.

# HISTORY

The Board of Crime Control has been collecting data on criminal activity, arrests and offenses since early in the 1970's. The collection process started with a simple reporting system by individual police agencies in various parts of the state on a trial basis, which resulted in limited data giving only a vague picture of the nature of crime in Montana.

Working in conjunction with federal data collection agencies and other state agencies an expanded process emerged. Initially, there were only a handful of police agencies involved. Today, there are over 100 reporting agencies.

The Montana Uniform Crime Reporting (MUCR) system evolved from and continues to comply with the Federal Bureau of Investigation's (FBI) national Uniform Crime Reporting (UCR) program. The national UCR program came into existence in 1930 as a result of the need for a nationwide and uniform compilation of law enforcement statistics. The Committee of Uniform Crime Records of the International Association of Chiefs of Police developed the UCR program, and Congress passed legislation on June 11, 1930 authorizing the FBI to act as the clearing-house for crime information. In the late 1960's, with the availability of funds from the Law Enforcement Assistance Administration, individual states began assuming responsibility for direct collection of the UCR data. The number of law enforcement agencies participating in the UCR and related programs grew from 400 in 1930 to over 15,000 by 1981.

Montana became involved in the national UCR reporting program in September, 1978, when the FBI transferred data collection responsibility from its UCR reporting division to the Montana Board of Crime Control's Criminal Justice Data Center. This transfer has enhanced crime data collection by giving the state more control over crime reporting, closer contact with law enforcement agencies, and more detailed information about crime.

### TODAY'S PROCESS

#### General Overview

The crime data contained in this report is initiated by the police departments, sheriff offices and other criminal justice agencies throughout the state. Criminal justice agencies that represent 94.9% of the state population are reporting criminal activity in their jurisdiction. 103 law enforcement agencies are diligently filling out reports and sending them to the central collection point, the Montana Board of Crime Control's Criminal Justice Data Center. The effort put forth by these agencies is most commendable.

### MUCR

The MUCR program is comprised of two distinct data base systems. The Offense and Activity system summarizes the types of crimes being committed, unfounded and actual offenses, property stolen and/or recovered by type and values, time and location of offenses, the status of each case, and the number of law enforcement officers killed or assaulted. The Custody system, now classified Arrest/Custody, records the types of arrests made, and the sex, race, and age of the person arrested. In 1986 the Custody system was expanded to collect information on people being held in jails throughout the state.

The transfer of responsibility for data collection from the FBI to the MUCR system has encouraged local law enforcement participation because the MUCR system provides contributors with both monthly and annual summaries of data for the Offense and Activity and Arrest/Custody information systems. Data is furnished voluntarily by county law enforcement agencies, local police departments, and other government agencies. Law enforcement agencies representing approximately 95 percent of the Montana population provided data in 1987.

In addition to the monthly reports to contributors, other reports and publications are compiled from MUCR data. These include the annual <a href="Crime in Montana">Crime in Montana</a> publication and a variety of special reports requested by private and public groups. The MUCR system data is also sent to the FBI for inclusion in the annual FBI publication <a href="Crime in the United">Crime in the United</a> States.

### THE FUTURE OF MUCR

The FBI and the National Bureau of Justice Statistics (BJS) initiated a joint effort to upgrade the national UCR program. Over the past several years an extensive effort has been made between these two Federal agencies and the various state programs dealing with UCR. The FBI's UCR program has not been changed since its inception in the 1930's.

The UCR program has always been known as a summary reporting system wherein the various police agencies around the country supply summary data to the FBI which is then published in the annual publication known as <u>Crime in the United States</u>. Although this publication has been known as an excellent resource document it was felt that something more was needed. This effort led to the 'Enhanced UCR Program' which will be expanded from the summary based system to an Incident Based System called 'IBR' for Incident Based Reporting.

The concept of the new IBR program is to capture information relating to an incident and be able to link various components together providing a clearer picture of what is happening with crime across the country. The new system will add information relating to the victim as well as the offender, which has never been a part of the UCR program. This new information should provide the public as well as law enforcement with an improved concept in the nature of criminal incidents.

Montana is one of seventeen (17) states participating in the program with the FBI and BJS. Hopefully, within the next year a number of local law enforcement agencies will join with the state in piloting the new IBR system for the State of Montana.

### OBJECTIVES

The fundamental objectives of the Montana Uniform Crime Reporting program are:

- (1) To inform the Governor, Attorney General, Legislature, other governmental officials and the public as to the nature of the crime problem in Montana.
- (2) To provide law enforcement administrators with criminal statistics for administrative and operational use.
- (3) To determine who commits crimes by age, sex, and race in order to find the proper focus for crime prevention and enforcement.
- (4) To provide base data and statistics to help measure the work-load of the criminal justice system.
- (5) To provide base data and statistics for research to improve the efficiency, effectiveness and performance of criminal justice agencies.

### DEFINITIONS

The following definitions are included to assist the reader in fully understanding the information provided in this publication:

Offenses Reported or Known by Police - Offenses or criminal acts that were reported, or became known, to law enforcement as having occurred during the reporting period.

Unfounded or Baseless Offenses - Offenses which are determined to be unfounded, false, or baseless as the result of subsequent information, action, or investigation.

Actual Offenses - The number of actual, verified offenses which is the difference between the Offenses Reported or Known and the Unfounded or Baseless Offenses.

Cleared by Arrest - For MUCR purposes, an offense can be cleared by arrest or by exceptional means. An offense is cleared by arrest when an offender is identified, there is enough evidence to charge him, and he is actually taken into custody. The arrest of one person may clear several offenses and the arrest of several persons may clear one offense. When some element beyond law enforcement control precludes formal charges against the offender, such as the victim's refusal to prosecute or the death of the offender, an offense can be cleared by exceptional means. No distinction is made between cleared by arrest and cleared by exceptional means in this publication.

Crime Index - The crimes of willful homicide, rape, robbery, aggravated assault, burglary, larceny/theft, and motor vehicle theft were selected for use as an index on the basis of their serious nature, their frequency of occurrence and the reliability of reporting from citizens to law enforcement agencies. The crime index is the total number of these offenses that come to the attention of law enforcement agencies.

Crime Rate - The crime rate indicates the number of Index Crimes per unit of population, generally per 100,000 population. It should be noted that the rate only takes into consideration the numerical factor of population and does not incorporate any of the other elements which contribute to the amount of crime in a given community.

The crime rate is obtained by dividing the total number of Index Crimes by the population or estimated population and multiplying the answer by 100,000:

Number of Index Crimes

Population of Law Enforcement X 100,000 = Crime Rate

Jurisdiction

The population data used in this report are provided by the State Census and Economic Information Center and the FBI. The figures are based on the latest population projections available.

Updated Data - Any data published here concerning figures for prior
years supersede those in previous reports.

Percent Rounding - Percentages shown in this publication may not add to 100 due to rounding.

### MUCR CRIME CLASSIFICATIONS

Reporting uniformity between law enforcement agencies depends upon the proper classification of offenses by the agencies. The MUCR system follows the basic guidelines for classifying offenses as formulated by the Uniform Crime Reporting Section of the FBI. It must be emphasized that the following classifications are not meant to be legal definitions of offenses. The classifications may differ considerably in some cases from the legal definitions as they are written in the Montana Code Annotated. The purpose of the FBI classifications is to establish a uniform statewide and national system for classifying similar offenses even though legal definitions may vary from state to state.

### THE SEVEN MAJOR OFFENSES

Seven crimes are recognized as being the most serious crimes in our society and the most likely to be reported to law enforcement. These are called the Seven Major Crimes, or the Part I Offenses. The MUCR system divides these crimes into 'Crimes of Violence' and 'Crimes Against Property':

Part I Offenses - The Seven Major Crimes

Crimes of Violence ..........

Homicide - The willful killing of one human being by another.

Rape - The carnal knowledge of a female forcibly and against her
will and all attempts to commit forcible rape.

Robbery - The taking or attempting to take anything of value from the care, custody or control of a person by force or threat of force or violence and/or by putting the victim in fear.

Aggravated Assault - An unlawful attack by one person upon another for the purpose of inflicting severe or aggravated bodily injury. This type of assault usually is accompanied by the use of a weapon or by means likely to produce death or great bodily harm.

Crimes against Property ......

Burglary - The unlawful entry of a structure to commit a felony or theft.

Larceny/Theft - The unlawful taking, carrying, leading, or riding away the possession of another.

Motor Vehicle Theft - The theft or attempted theft of a motor vehicle.

Many Part II Offenses are reported in Crime in Montana. They encompass other crimes which, although serious, are not part of the Seven Major Crimes. These Part II Offenses are listed below:

#### Part II Offenses

Negligent Manslaughter Vandalism
Other Assaults Weapons
Arson Prostitution
Forgery and Counterfeiting Sex Offenses
Fraud Narcotic Drug Laws
Embezzlement Gambling
Stolen Property Offenses Against the Family

### CRIME FACTORS

The amount and type of crime reported in Crime in Montana is based upon the number of reported offenses and does not measure those offenses unknown to the law enforcement community. A considerable volume of crime is not reported to law enforcement agencies. Many crimes are unreported because victims are unaware they have been victimized or have themselves been participants in illegal activity. Unidentified crimes can include, but are not limited to, buying stolen property, fraud, embezzlement, and shoplifting. Illegal activity requiring victim participation can include prostitution and narcotics activity. Other reasons crimes are unreported are that are that victims believe there is very little that can be done to catch the perpetrator, they fear the publicity of a police investigation, or the crime was too personal or private to report.

The following factors can also influence the type and volume of criminal activity in the state:

Density and size of the community;

Demographic characteristics of the population;

Economic status of the population;

Influence on population stability by seasonal workers,

tourism, etc.;

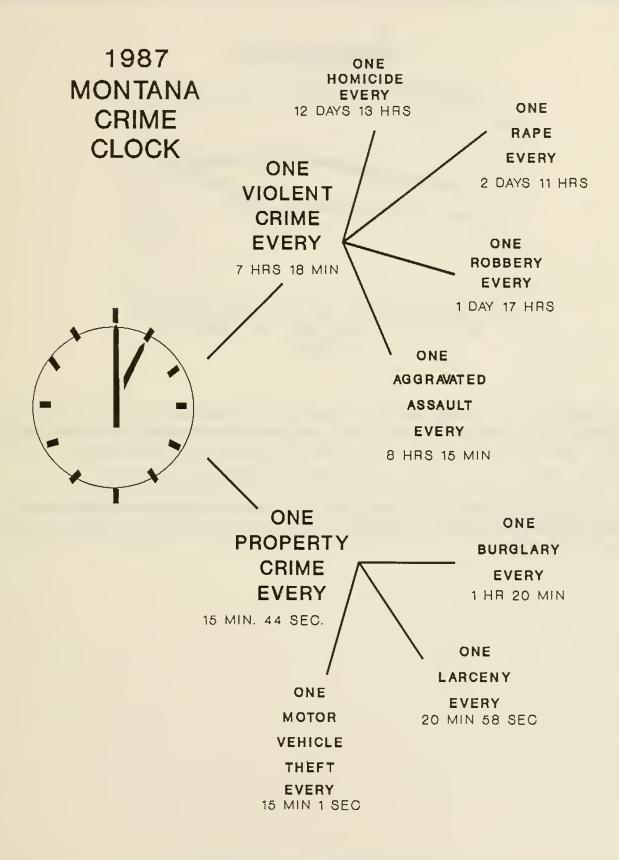

Educational, recreational, and religious characteristics of the population;

Effective strength of local law enforcement agencies; Policies of prosecuting officials and the courts; and, Public attitudes toward laws and law enforcement. SECTION

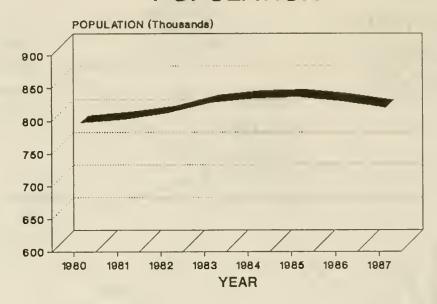

TWO

Crime In Montana

# **POPULATION**

Population is estimated in most years based on FBI and state projections. The chart shows a steady growth over the first ten years shown, with a slight decline between 1985 and 1987. The population of 1976 was set at 753,000 and increased to 809,000 in 1987.

Population comparisons are used throughout the text to show crime rate, number of crimes per 100,000 population, and other analyses of crime in Montana.

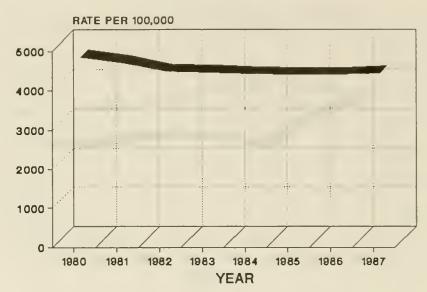

# **INDEX**

Total crime illustrated includes only the seven (7) major crimes:
1) homicide; 2) rape; 3) robbery; 4) assault; 5) burglary; 6) larceny; and, 7) motor vehicle theft.

The seven (7) major crimes accounted for 34,551 offenses in 1987. Crimes of Violence numbered 921 at 2.7 percent of the total, while crimes against property were reported at 33,630 which is 97.3 percent of the total.

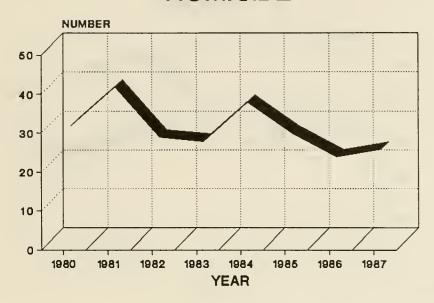

Crime rate is a standard of measurement used to provide a uniform process of statistical analysis of crime in any given area. The crime rate is useful when comparing jurisdictions with unequal populations.

The chart above indicates a trend declining over the past eight (8) years. The base year of 1980 had a crime rate of 4,678.3 compared to the 4,270.8 rate in 1987. The low in 1985 actually measured 4,231.0 and in 1980 the high was 4,678.3. The calculated average would be in the 4,346.3 range.

# HOMICIDE

Homicide is defined as the willful (non-negligent) killing of one human being by another, except in those cases classified as justifiable homicides. Under the UCR definitions, justifiable homicides are specifically limited to the killing of an offender by a police officer in the line of duty or the killing of a felon by a private citizen. This definition does not take into consideration the findings of a coroner's jury or court. Suicides are not defined as homicides under UCR. Attempts to commit homicide are classified as aggravated assault.

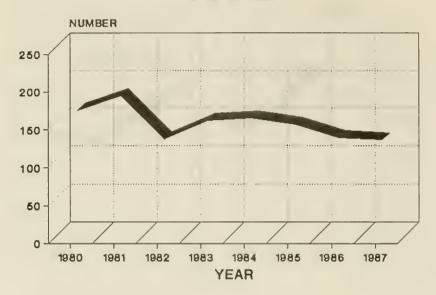

### 1987 SUMMARY

A total of 24 homicides was reported in 1987. During this year, the number of homicides increased 0.09 percent compared to those reported in 1986.

There were 19 homicides cleared by arrest or exceptionally cleared, for a clearance rate of 79.2 percent statewide.

Homicides accounted for 2.6 percent of all violent crimes and .07 percent of the total crime index. The homicide rate in Montana was .3 per 10,000 population.

# RAPE

Forcible Rape is defined as the carnal knowledge of a female through the use or threat of force. Assaults to commit rape or attempts to commit rape are included in this category. One offense is counted for each victim of rape. Statutory rapes and other types of sexual assaults are not counted as rapes under the UCR program.

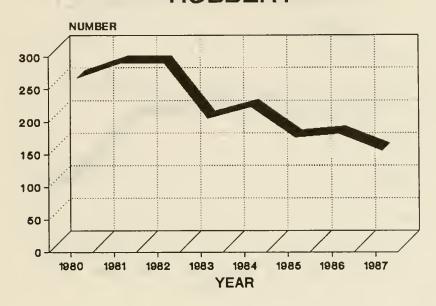

### 1987 SUMMARY

A total of 127 rapes was reported in 1987. During this year, rapes decreased 2.31 percent compared to those reported in 1986.

There were 65 rapes cleared by arrest, or exceptionally cleared, amounting to a clearance rate of 51.2 percent statewide.

Rapes accounted for 13.8 percent of all violent crimes and .37 percent of the total crime index. The rape rate in Montana was 1.6 per 10,000.

# ROBBERY

Robbery is defined as the taking or attempting to take anything of value from the care, custody, or control of a person or persons by force or threat of force or violence and/or by putting the victim in fear. Robbery is a violent crime in which the element of personal confrontation between the victim and offender is present. Attempts to rob are included in the robbery count. One robbery is counted for each distinct operation, regardless of the number of victims present at the time.

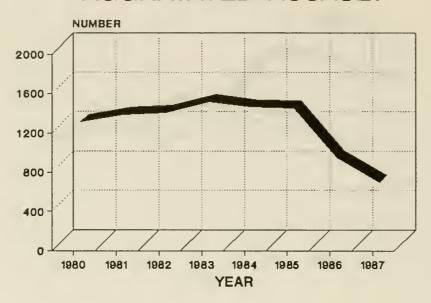

### 1987 SUMMARY

A total of 145 robberies was reported in 1987. During this year, robberies decreased 15.2 percent compared to those reported in 1986.

There were 50 robberies cleared by arrest or exceptionally cleared, amounting to a clearance rate of 35.5 percent.

Robberies accounted for 15.7 percent of all violent crimes and .42 percent of the total crime index. The robbery rate in Montana was 1.8 per 10,000 population.

# AGGRAVATED ASSAULT

Aggravated Assault is defined as an unlawful attack by one person upon another for the purpose of inflicting severe or aggravated bodily injury. This type of assault usually is accompanied by the use of a weapon or by means likely to produce death or great bodily harm.

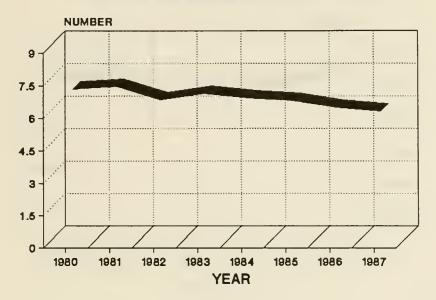

### 1987 SUMMARY

A total of 625 aggravated assaults was reported in 1987. During this year, aggravated assaults decreased 28.82 percent from the 1987 total.

There were 368 aggravated assaults cleared by arrest or exceptionally cleared for a clearance rate of 58.9 percent statewide.

Aggravated assault accounted for 67.9 percent of all violent crimes and 1.81 percent of the total crime index. The aggravated assault rate in Montana was 7.7 per 10,000 population.

# BURGLARY

Burglary is defined as the unlawful entry of a structure to commit a felony or theft.

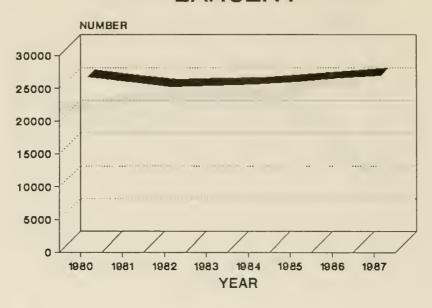

### 1987 SUMMARY

A total of 6,003 burglaries was reported in 1987. During the reporting year burglaries decreased 2.8 percent from the 1986 total.

There were 886 burglaries cleared by arrest or exceptionally cleared for a clearance rate of 14.8 percent statewide.

Burglary accounted for 17.8 percent of all property crimes and 17.37 percent of the total crime index. The burglary rate in Montana was 74.2 per 10,000 population.

# LARCENY

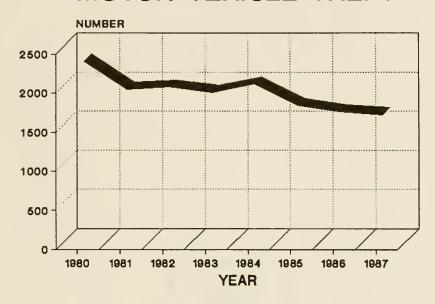

Larceny/theft is defined as the unlawful taking, carrying, or riding away of property from the possession or constructive possession of another. It includes crimes such as shoplifting, pocketpicking, etc., in which no use of force, violence or fraud occurs.

### 1987 SUMMARY

The number of crimes classified as larceny reached 25,990 in 1987. This was a slight increase of 1.65 percent over the past year. There were 5,647 larcenies cleared by arrest or exception in 1987, which is a 21.7 percent clearance rate on a statewide basis.

Larceny accounted for 77.3 percent of all property crimes and 75.22 percent of the total crime index. The larceny/theft rate in Montana was 321.3 per 10,000 population.

# MOTOR VEHICLE THEFT

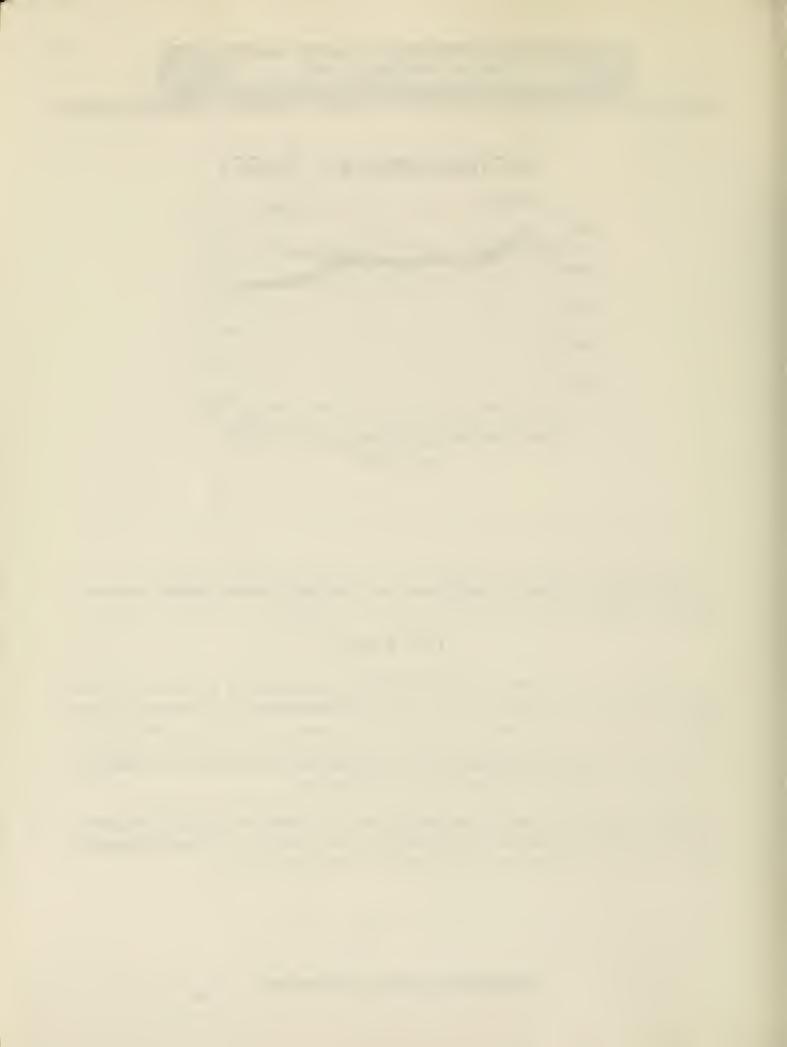

Motor vehicle theft is defined as the theft or attempted theft of a motor vehicle.

### 1987 SUMMARY

A total of 1,637 motor vehicle thefts was reported in 1987. During the reporting year motor vehicle thefts decreased 2.15 percent from 1986.

There were 486 motor vehicle thefts cleared by arrest or exception with a 29.7 percent clearance rate statewide.

Motor vehicle thefts accounted for 4.9 percent of all property crimes, and 4.74 percent of the total crime index. The motor vehicle theft rate in Montana was 20.2 per 10,000 population.

SECTION THREE

Reported Offenses

#### OFFENSES

The 1987 state summary of offenses known to the police presents a breakdown of the numbers of offenses reported to law enforcement agencies, unfounded or baseless offenses reported, actual offenses, and offenses cleared by arrest. The Cleared by Arrest Under 18 represents only juvenile arrests. The Percent of Actual Offenses Cleared by Arrest is the percent of total offenses, adult and juvenile, cleared by arrest.

1987 STATE SUMMARY OF OFFENSES KNOWN TO POLICE

	OFFENSES				01 54050	% ACTUAL
	REPORTED		ACTUAL	TOTAL	CLEARED	OFFENSES

Drugs	1,049	3	1,046	778	97	74.4
Gambling	44	0	44	14	0	31.8
Offenses - Family	484	10	474	124	6	26.2
TOTAL PART 11	22,638	264	22,374	5,824	977	26.0
GRAND TOTAL	58,784	1,859	56,925	13,345	3,572	23.4

#### . From 1986 to 1987:

^There was a 1.7 percent increase in the rate per 100,000 population of crime index offenses reported.

^There was a 21.4 percent decrease in the rate for violent crimes.

^There was a 2.5 percent increase in the rate for property crimes.

#### Of the 933 violent crimes reported:

^Willful homicide accounted for 3.0 percent

^Forcible rape accounted for 14.6 percent

^Robbery accounted for 15.4 percent

^Aggravated assault accounted for 67.0 percent

#### Of the 33,834 property crimes reported:

^Burglary accounted for 17.6 percent

^Larceny/theft accounted for 77.6 percent

^Motor vehicle theft accounted for 4.8 percent

#### CRIME INDEX PROFILE

The pie chart below shows the proportion of each index crime to the total of all 1987 index crimes.

The three property crimes, burglary, larceny/theft and motor vehicle theft, account for 97.33 percent of all index crimes. The violent crimes, homicide, rape, robbery, and aggravated assault, account for 2.67 percent of all index crimes.

1987
CRIME INDEX PROFILE

Total Crimes (Property & Personal)

	Number	% of Total
Homicide	24	.07
Rape	127	.37
Robbery	145	.42
Assault	625	1.81
Burglary	6,003	17.37
Larceny	25,990	75.22
Motor Vehicle Theft	1,637	4.74
TOTAL INDEX	34.551	100.00

1987 - CRIME RATE SEVEN MAJOR INDEX CRIMES

According to the U.S. Bureau of The Census, Montana's estimated population in 1987 was 809,000. This is the population figure used in calculating the crime rates in this publication.

#### VIOLENT CRIMES

#### CRIMES AGAINST PROPERTY

Index Offenses	Number of Actual Offenses	Rate per 100,000 Population	Index Offenses	Number of Actual Offenses	Rate Per 100,000 Population

	921	113.8	Total	33,630	4,157.0
GRAI	ND TOTAL				
				34,551	4,270.8

The 1987 Montana crime rate is 4,270.8. This means that 4,270.8 of every 100,000 Montana residents were victims of a major crime in 1987. In 1987 there were:

4,270.8 crimes per 100,000 persons
427.1 crimes per 10,000 persons
42.7 crimes per 1,000 persons
4.3 crimes per 100 persons

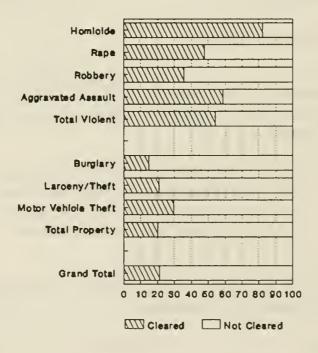

The probability of being a crime victim in Montana for the year 1987 was 1 out of each 25 persons.

#### Clearances

An offense is considered cleared when a law enforcement agency has identified an offender, gathered sufficient evidence, filed a charge, and he is actually taken into custody. The arrest of one person can clear several crimes or conversely, several persons may be arrested in the process of clearing one crime.

The following illustration shows the percentage of actual offenses cleared by arrest. Note that property crimes, burglary, larceny/theft, and motor vehicle theft, have the lowest percentages of clearance, while violent crimes have the highest percentages of clearance.

PERCENTAGE OF ACTUAL OFFENSES CLEARED BY ARREST - 1987 SEVEN INDEX CRIMES

#### (Crime Incidence Comparison)

A comparison of the total number of crimes reported provides a measure of the fluctuation in criminal activity between 1986 and 1987.

The number of index crimes decreased by 67 between 1986 and 1987, The overall incidence of crime 0.2 percent between 1986 and 1987.

#### Crime and Population Growth Trends

The crime rate and population growth trends for the past eleven years are shown below. The crime index reflects the actual number of crimes reported to law enforcement.

In 1980, 36,791 index crimes were recorded for a crime rate of 4,678.3 per 100,000 with a total population 786,400. By 1987, the number of index crimes had dropped to 34,551, and the crime rate reduced to 4,270.8 with an estimated population of 809,000. The 1987 figures represent a 6.1 percent decrease in the number of index crimes, an 8.71 percent decrease in the crime rate, and a 2.87 percent increase in the population over the 1980 figures.

The crime index and crime rate figures have experienced a relatively smaller percentage of change than the population has over the eleven year period. The crime index and crime rates have shown sharp, but sporadic decreases over the period while the state population has shown a slight, but steady increase.

## PERCENTAGE CHANGE

#### AGENCY REPORTS

This section contains a summary of offenses reported to each law enforcement agency. If the crime rates appear to be extreme for some jurisdictions, the cause could be a low population within that jurisdiction. In communities with low populations any fluctuation in the number of crimes has a major impact on the crime rate. Seasonal variations in population can have a marked influence on crime rates, when the permanent population is used as the base figure for computation.

#### Summary

The 1987 crime rate for each reporting county in Montana is listed below. Eleven (11) counties had crime rates above the state-wide total of 4270.8 crimes per 100,000 population and accounted for 80 percent of the state's reported crime.

The eleven counties are not a contiguous geographical high crime area, nor do they all represent high population areas. Of the eleven, six are considered high population areas (having a population of 40,000 or more). The other counties are classified as moderate to low population areas. In areas of low population, any fluctuation in the number of index crimes has a major impact on the crime rate.

SECTION
FOUR
Juvenile
Probation
Information
System

#### GENERAL ACTIVITY

The general activity of the Juvenile Probation offices (a part of the Youth Court), is measured in four component parts: number of cases, number of referrals, number of offenses, and number of detentions. Cases may be thought of as individual youth who become involved with the juvenile justice system for some reason, criminal In 1987 5,568 cases were reported on JPIS which is down 33 cases from 1986. The 5,568 cases were referred to the probation office 7,194 times throughout the year. In other words, some of the 5,568 youth were involved with the probation office more than once during The 5,568 cases incorporated 9,742 offenses, down 183 offenses from the prior year. It is important to note, though, that the majority of cases are referred but once and commit but one offense. It is the repetitive cases which tend to be defined as the more serious offenders. Detentions, the final measure, totaled 323 youth held in jail in 1987, which is 4.4 percent of the referrals to Juvenile Probation. Detentions for 1987 were down 3.8 percent from the prior In August, 1987 Yellowstone County opened Montana's first secure detention facility for youth, the Youth Service Center in Billings. The chart below indicates the general activity of the Youth Courts throughout the state and this pattern is little changed from 1986. As in the past, the bulk of the activity for Youth Courts is with males.

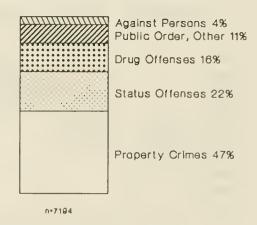

MALES FEMALES

#### REASON FOR REFERRAL

Four major categories or reasons for referral constitute the 7,194 referrals: 1) 47% are for property crimes such as theft, burglary, or larceny; 2) 22% of the referrals are for status offenses such as truancy, curfew, or runaway; 3) 11% of the referrals are for offenses against the public order such as disturbing the peace, or traffic violations; 4) 4%, of the referrals are for crimes against persons such as robbery, assault, rape, or homicide. Crimes against persons command the most attention yet these make up the least referrals. Crimes against persons seldom fluctuate as a percentage of the total referrals and the percentage is unchanged from 1986. The 1986 issue of CRIME IN MONTANA predicted an increase in the number of referrals for drug related reasons. In 1986, 12% of referrals were drug offenses, increasing to 16% in 1987 as predicted. The column chart below shows the percentage of referrals in each category.

### PERCENTAGE OF REFERRALS By Offense

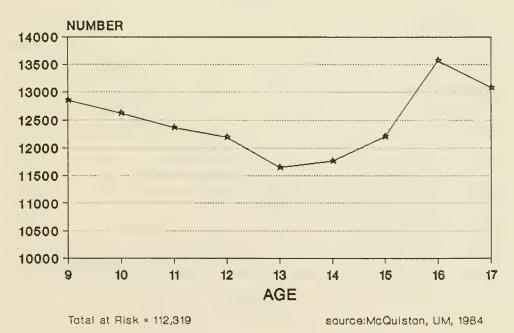

Drug Offenses include Some Liquor Offenses

#### NUMBER OF YOUTH AT RISK

Consideration of the number of future referrals to juvenile probation should be in context of the total number of children in Montana who are 'at risk', or, how many children are in the state who may potentially be referred for an offense of some type. During 1987 there was an estimated 112,319 children ages 9 through 17 at risk and most were 16 and 17 years old. There is, thus, a potential for increased rates of referral, offenses and detentions in 1988 for the 16 and 17 year old group based on the size of the 1987 "at risk" age group alone. After 1989, the size of the "at risk" group will begin to decrease and the number of referrals may reflect the change in population structure. The total number of youth at risk increased slighty (by 413) in 1987, due mainly to an increase in the number of younger children, age 9-10. This slight "bulge" or increase in the number of younger children will represent an increased "at risk" group of 15-17 years old in 7 to 9 years.

#### Number of Youth At Risk Ages 9 to 17 1987

#### RATE OF REFERRAL BY AGE

The number of youth at risk and JPIS information on the age at referral are used to calculate a rate of referral per 1,000 youth at risk for each age 9 to 17. This, as noted before, can help to pin-point critical ages and potential changes in Youth Court activity. The rate of referral shown here reveals a straight line increasing from about age 12 through age 16, and then a slower increase after age 16. Thus, those youth coming age 15, 16 and 17 present the highest risk of referral. As the number of children in these ages increases, the activity of the Youth Courts may also increase. The peak rate of referral in 1987 was about 132 referrals for every 1,000 youth age 17, down 3 per 1,000 from 1986. On the other end, and equally important, is the rate of referral for the very young. For every 1,000 children age 9, approximately 6.5 were referred to juvenile probation which is also down a tiny amount (.4) from the 1986 rate. The general pattern of the curve shown in the chart below is typical of the past several years.

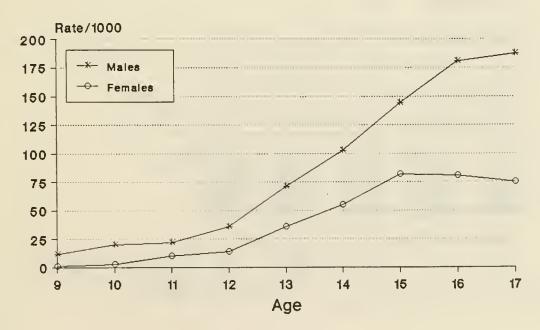

# Rate of Referral Per 1000 Youth By Age 1987

#### RATE OF REFERRAL BY AGE AND SEX

The nearly straight line increases for the overall rate of referral shown in the prior chart has interesting inconsistencies when the sex of the youth is considered. This chart clearly shows differences in the rate of referral per 1,000 boys versus girls starting at about age 13 and continually widening thereafter. The rate of referral for boys continues to increase to age 17, whereas at age 15 the rate for girls shows a dramatic leveling and even a decline. In addition, this chart shows again the referrals are predominately males in the 16 and 17 year old group. The peak referral rate for males is about 188 per 1,000 boys age 17 while female referrals peak at about 82 per 1,000 girls age 15. In 1986 males peaked at age 17 with almost 200 referrals per 1000, while females peaked at age 16 at about 80. The general pattern reflected in this chart has been consistent year to year.

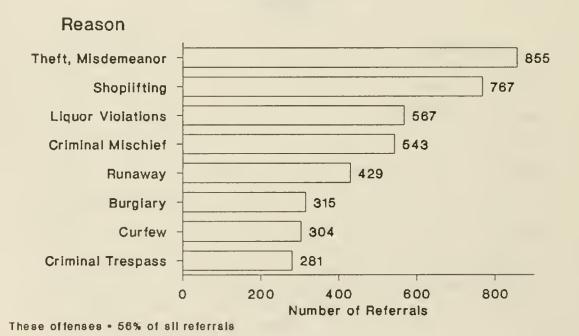

# Rate of Referral Per 1000 Youth By Age and Sex 1987

MOST FREQUENT REASON FOR REFERRAL

A previous chart, page 46, illustrated the four major reasons for referral to the Youth Court. Here we see the top eight specific reasons for the referral. As expected, property offenses predominate, especially misdemeanor thefts. Liquor violations moved from second to the third most frequent reason for referral in 1987. The chart shows a mixture of criminal offenses with status offenses among the 8 major reasons. Curfew violations, runaways and some of the liquor law violations are all offenses only for minors and are of special concern to juvenile justice. The high number of property offenses is also of concern and represents a pattern consistent with prior years.

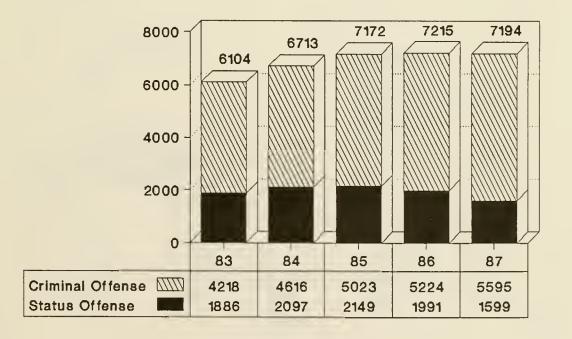

# Most Frequent Reasons For Referral 1987

#### COMPARISON OF YEARLY REFERRALS

Referrals to juvenile probation are often broken into the criminal offense (delinquent) and the status offense (sometimes called YINS). This chart compares these referrals over a five year span. The percentage of status offenses had remained fairly consistent over past years (about 30%) but during 1986 the percentage of status offenses dropped a little to about 28% and declined again in 1987 to 22%. The chart illustrates the consistent pattern of referrals for both criminal and status offenses over the years.

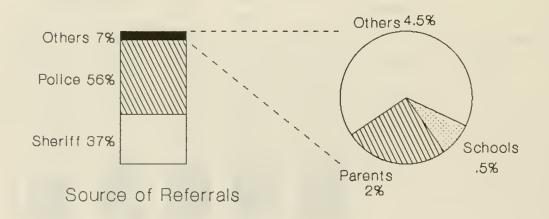

# Total Referrals Yearly Comparison by Type 1987

#### WHO MAKES REFERRALS?

It is clear that law enforcement agencies are the prime referral source. In 1987, the Police departments and Sheriff's offices accounted for 93% of all referrals. The remaining 7% is composed of a wide variety of referral sources including Fish, Wildlife and Parks, tribal courts, parents, or school officials. The "Other" category is further broken down into its three major components. With 9 of 10 referrals involving law enforcement agencies, programs aimed at early intervention, diversion, and reduction of secure detentions should also address law enforcement needs and problems. The percentage of law enforcement referrals increased 3% since 1985.

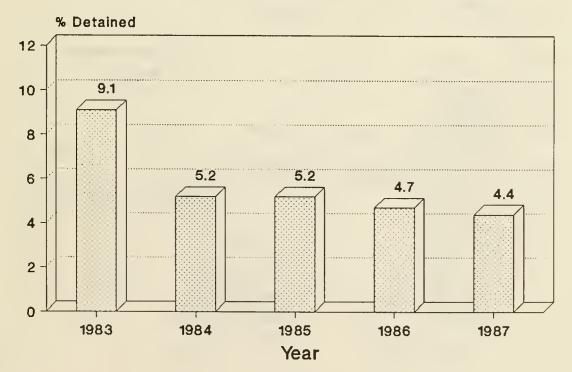

## Who Makes Referrals?

#### PERCENT OF REFERRALS DETAINED

The percentage of all referrals resulting in secure detention (jail), affects planning for the removal of all juveniles from adult jails and Montana's efforts to meet the mandates of the Juvenile Justice and Delinquency Prevention Act. The reduction of the number of youth placed in adult jails remains a primary goal of the State Youth Services Advisory Council. Over the years a substantial reduction in the percentage of referrals detained has been evidenced. In the past, 25 to 27 percent of the referrals were detained. Over the last 4 year period, the percentage of referrals detained remained near 5%. For the second time, 1987 saw the percentage of referrals detained fall below 5%. In future years, neither continued drops nor great increases are anticipated.

### Percent Of Referrals Detained By Year 1983 - 1987

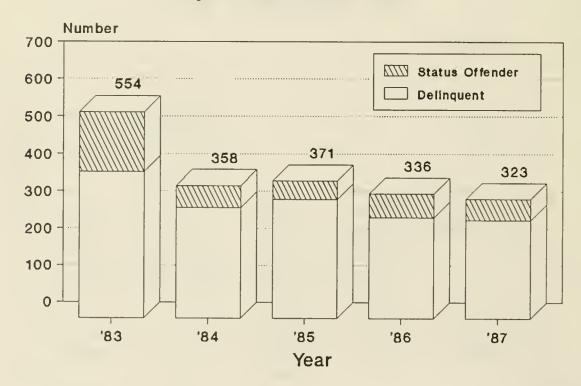

n=7194

#### THE NUMBER OF DETENTIONS

The chart below translates the percentage of referrals detained into the real number of secure detentions which occurred in 1987. The number of secure detentions of youth in 1987 was 323. The chart shows detentions of both status offenders and delinquents. The number of status offenders detained in 1987 decreased by 6 from the prior year; the percentage of detentions which are status offenders remained constant at about 18%. An important goal is to reduce the detention of status offenders to zero. A crucial consideration behind the data presented here is the very small numbers of detainees per year. When status offenders are eliminated from consideration, the remaining number of secure detentions is so small, 266, that effective and cost efficient solutions are difficult to develop. It is also important to note that the status offenders detained were generally held less than 24 hours or were from other jurisdictions.

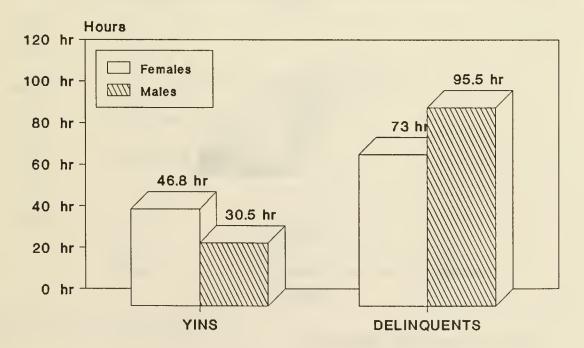

## Total Number of Detentions By Year 1983 - 1987

#### TIME DETAINED BY SEX AND TYPE

JPIS data indicates great differences in the amount of time detained by sex and type of referral. In general, delinquents are detained longer regardless of sex. An interesting difference is the shorter average time in detention for male YINS, about 30 hours, versus females, about 47 hours. On the other hand, delinquent males average about 95 to 96 hours in detention while female delinquents average closer to 73 hours. The pattern for delinquents is similar to that seen in 1986 but the pattern is reversed from the 1986 pattern for YINS detentions. In 1986 male YINS were detained longer than females by about 6 hours on the average. The difference between the average time in detention for delinquent males and females has been decreasing since 1985 when females were held about half as long as males.

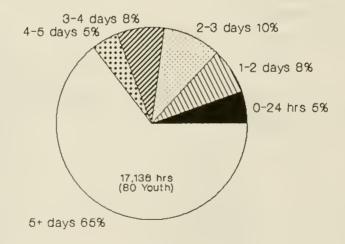

# Average Hours In Detention By Sex 1987

#### TOTAL HOURS DETAINED

The 323 youth detained in 1987 amassed 26,554 hours in detention across the state (which is 1,106 days or 3 years of accumulated time). The total time accumulated is about 6% less than the total time accumulated in 1986. Thus, fewer youth in 1987 accumulated less time in secure detention than in the prior year. The chart shows how the total hours accumulated were distributed by the length of time detained. A key point is, the youth who are detained long term, over 5 days, account for almost two-thirds (64%) of all the time accumulated by all detainees. This means that 80 long term detainees accumulated a total of 17,136 hours in jail (which equals 714 days or 1.9 years). On the average, then, these 80 youth were held 214 hours. By addressing the long term detainee issue, the major factor in the amount of time spent in adult jails will also be addressed. The average daily population of long term detainees for 1987 would have been about 2 youth per day, the same as 1986. In 1986, 71 youth were held long term.

### Percent of Total Hours Detained

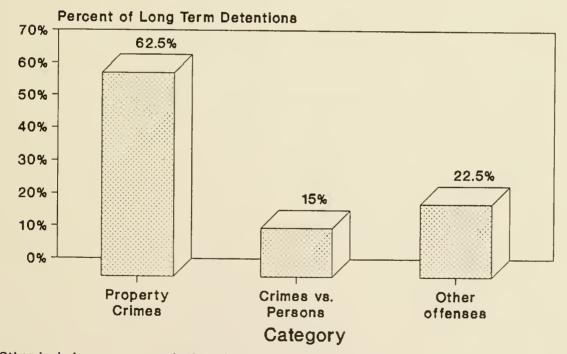

64.5% of the total 26,554 detention hrs.

#### REASON FOR LONG TERM DETENTION

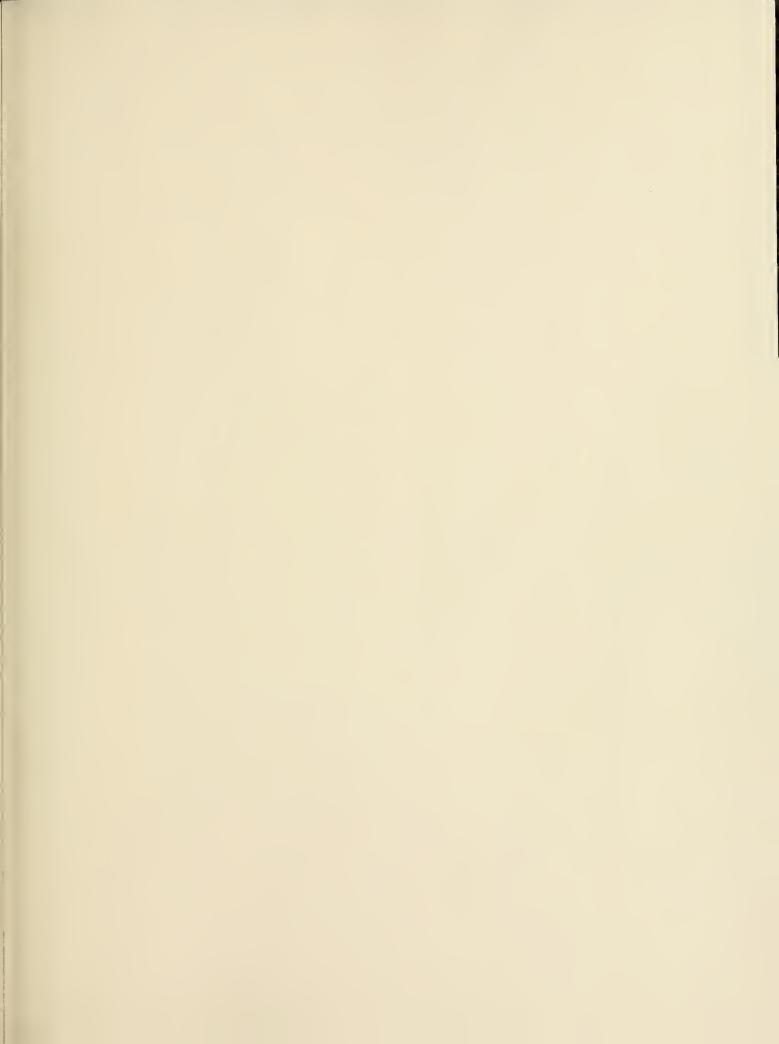

The 80 youth held long term were placed into secure detention for a variety of offenses. The general reasons are shown in the chart below. The most frequent reason for detention is property crimes. Twelve of the property crimes were burglaries and 11 were felony theft crimes. The property offenses of burglary, felony theft (over \$300), misdemeanor theft, and unauthorized use of a motor vehicle account for 62.5% of the long term detentions. This pattern remained consistent with 1986.

## Long Term Detentions By Offense Type

Other includes runaway, probation vio., etc. N=80. Long term= 5 days +
